

Flexible Gap Seals fill in those hard to seal ½" to 6" gaps between server racks. Increase your data centre's cooling efficiency and drastically reduce energy costs. Flexible Gap Seals attach to server racks by using a flexible magnetic side trim.

Features

Sized for gaps ranging from ½" wide to 6" wide

Class 1 Fire Rated

Meet NFPA 701 and NFPA 76 standards for Data Center applications

PolySim is a non-outgassing material that has permanent Static Dissipative properties

Benefits

Low cost, easy-to-store, flexible seal

Fills gaps between ½" wide to 6" wide

Easily attaches to server racks

Specifications

2133mm high

Two sizes fill gaps of ½" - 3" and ½" to 6"

Flexible magnetic side trim

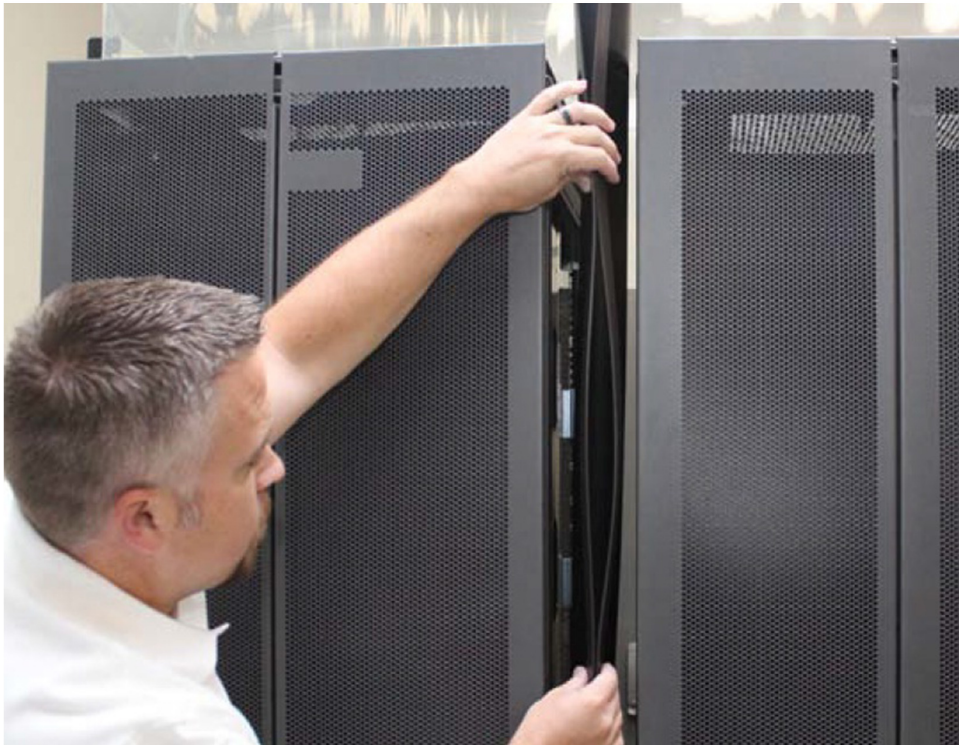

Open Gap Between Racks

Flexible Gap Seal Between Racks

Installation

Squeeze the two magnet edges together and slide into the gap. The magnets seal to the sides of the racks completing the installation. You can also trim the seal to fit the rack height, using a knife or scissors.
